Applicant's election without traverse of Group III in the reply filed on 11/16/04 is acknowledged.

Claims 14-16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Beauchemin et al 5720971.

Beauchemin show increased milk quality and production (yield) (col. 4, lines 29-41) when ruminants are fed enzyme treated feeds. Enzymes are any broad spectrum cellulase (col. 5, lines 25-28) from microbial sources.

Since the instant feeds are fed <sup>an</sup> the instant invention, the artisan given Beauchemin would know that an increase in milk, fat and protein components would result if any microbial cellulases were used. Simple testing would permit one to determine how much enzyme would be required to provide the desired increase (col. 7, lines 37-60).

Claims 14-16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Toshiyasu et al JP 05192093.

Here too (abstract) any cellulase increases milk yield.
